

SERVICE ANALYTICS

Preventive Maintenance & Calibration

- Installation
- Commissioning
- Maintenance
- Verification
- Calibration
- Certification
- Consultancy
- Operator's Training
- Repair
- Upgrade

Alongside the development and production of our own process systems, DENWEL also represents prestigious partners in the field of instrumentation:

- **ORBISPHERE:** O₂, CO₂ and N₂ analyzers
- **OPTEK:** Turbidity and Color measurement

These analyzers monitor important parameters of quality and productivity and hence regular maintenance and calibration are required for consistent product quality.

DENWEL provides professional service on site, relieving the customer from unproductive duties while increasing availability and reliability of the measuring devices.

Advantageous and cost reducing service contracts ensure scheduled and periodic service, preventive maintenance, traceable calibration and complete record of a specific analyzer.

Orbisphere expertise

With ten years of collaboration and more than 300 systems installed, DENWEL has great experience and deep knowledge of Orbisphere measuring systems. Our technicians are regularly trained in the manufacturer's facilities and kept up to date with the latest development.

Service capabilities start from choosing the right location for representative inline measurement, include preventive maintenance and traceable calibration and highlight in focused operators training for package analyzer 3625 with user qualification test.
